

After a Concussion Guidelines for

# RETURN TO PLAY

A **CONCUSSION** is a serious event, but you can recover fully from such an injury if the brain is given enough time to rest and recuperate. Returning to normal activities, including sport participation, is a step-wise process that requires patience, attention, and caution.

Each step must take a **minimum of one day** but could last longer, depending on the player and his or her specific situation.

If symptoms reappear at any stage, go back to the previous stage until symptom-free for at least 24 hours.

## STEP 1: No physical/sporting activity.

Complete the *Return to Learn* protocol before beginning the *Return to Play* process. Refrain from participating in any sporting and physical activities. Only indulge in activities that do not worsen symptoms. Once symptoms are gone, a physician, preferably one with experience managing concussions, should be consulted before beginning a step wise return to play process.

## STEP 2: Light aerobic exercise.

Activities such as walking or stationary cycling. The player should be supervised by someone who can help monitor for symptoms and signs. No resistance training or weight lifting. The duration and intensity of the aerobic exercise can be gradually increased over time if no symptoms or signs return during the exercise or the next day.

**Symptoms?** Return to rest until symptoms have resolved. If symptoms persist, consult a physician.

**No symptoms?** Proceed to Step 3 the next day.

## STEP 3: Sport specific activities.

Activities such as skating or throwing can begin at step 3. There should be no body contact or other jarring motions such as high speed stops or hitting a baseball with a bat.

**Symptoms?** Return to rest until symptoms have resolved. If symptoms persist, consult a physician.

**No symptoms?** Proceed to Step 4 the next day.

## STEP 4: Begin Drills without body contact.

**Symptoms?** Return to rest until symptoms have resolved.

If symptoms persist, consult a physician.

**No symptoms?** The time needed to progress from non-contact exercise will vary with the severity of the concussion and with the player. **Proceed to Step 5 only after medical clearance.**

## STEP 5: "On Field" practice with body contact, once cleared by a doctor.

**Symptoms?** Return to rest until symptoms have resolved.

If symptoms persist, consult a physician.

**No symptoms?** Proceed to Step 6 the next day.

## STEP 6: Game play.

## NEVER RETURN TO PLAY IF YOU STILL HAVE SYMPTOMS!

**A player who returns to active play before full recovery from the first concussion is at high risk of sustaining another concussion, with symptoms that may be increased and prolonged.**

## HOW LONG DOES THIS PROCESS TAKE?

These steps do not correspond to days! It may take many days to progress through one step, especially if the concussion is severe. As soon as symptoms appear, the player should return to rest until symptoms have resolved and wait at least one more day before attempting any activity. **The only way to heal a brain is to rest it.**

## HOW DO I FIND THE RIGHT DOCTOR?

When dealing with concussions, it is important to see a doctor who is knowledgeable in concussion management. This might include your physician or someone such as a sports medicine specialist. Your family doctor maybe required to submit a referral to see a specialist. Contact the Canadian Academy of Sport and Exercise Medicine (CASEM) to find a sports medical physician in your area. Visit [www.casem-acmse.org](http://www.casem-acmse.org) for more information. You can also refer your doctor to [parachutecanada.org](http://parachutecanada.org) for more information.

## WHO DO THESE GUIDELINES APPLY TO?

These guidelines were developed for children over the age of 10; those younger may require special guidelines, and more conservative treatment and care. Return to Play Guidelines should be at the discretion of the physician.

## WHAT IF MY SYMPTOMS RETURN DURING THIS PROCESS?

Sometimes these steps can cause symptoms of a concussion to return. This means that the brain has not yet healed, and needs more rest. If any signs or symptoms return during the Return To Play process, they should stop the activity and rest until symptoms have resolved. The player must be re-evaluated by a physician before trying any activity again. Remember, symptoms may return later that day or the next, not necessarily during the activity!
